

Nicholas Grimshaw: Waterloo International Terminal

A+U Pub., 1995

Monografía

The International Terminal Waterloo is a multi-faceted transport interchange that was designed to facilitate the journeys of 15 million international rail passengers per year. Grimshaw\$1 (Bs brief for the project was to build a streamlined terminal, and because of the international service, it had all the requirements of an airport including full security screening, immigration and customs border control. All within a constrained central London site, through which passengers could pass quickly and efficiently. The resulting landmark design is a monument to the new railway age heralded by the advent of cross-channel rail travel in Britain
