

## Process Control [ The Passive Systems Approach /

Bao, Jie

Springer London, 2007

Monografía

Process Control introduces an emerging area in process control \2013 control system analysis and design based on the concept of passive systems. Passive systems are a class of processes that dissipate certain types of physical or virtual energy, defined by Lyapunov-like functions. Passivity and associated stability conditions form one of the cornerstones in control theory and have recently begun to be applied in process control. Defined as an input-output property, the concept of passivity implies stability conditions for interconnected systems. Passive systems are minimum phase and thus very easy to control via output feedback, even if they are highly nonlinear and coupled. Therefore, the passivity framework can be used in process input-output controllability analysis as well as control design. Here, the concept of passive systems is also linked to process thermodynamics to provide process engineers with insights into the physical bases of the above results. In this book, passivity-based developments in the areas of robust process control, decentralized control, fault tolerant control, process controllability analysis and nonlinear process control are addressed systematically for the first time. Written for the industrial, engineering and academic communities, the emphasis is placed on results that enhance insight and intuition. Application issues are illustrated by case studies in all the main chapters. MATLAB® routines for selected examples and a library of functions that implement the system analysis and control design methods developed in Process Control can be downloaded from springer.com. This book presents the reader with both the conceptual framework and practical tools for passivity-based system analysis and control

Título: Process Control Recurso electrónico-En línea] The Passive Systems Approach by Jie Bao, Peter L. Lee

Editorial: London Springer London 2007

Descripción física: XIX, 253 p. digital

**Tipo Audiovisual:** Engineering Chemical engineering Systems theory Engineering Control Engineering Industrial Chemistry/Chemical Engineering Systems Theory, Control

Mención de serie: Advances in Industrial Control 1430-9491

Documento fuente: Springer eBooks

Nota general: Engineering (Springer-11647)

**Contenido:** Introduction -- Dissipativity and Passivity -- Passivity-based Robust Control -- Passivity-based Decentralized Control -- Passivity-based Fault-tolerant Control -- Process Controlability Analysis Based on Passivity -- Process Control Based on Physically Inherent Passivity -- Appendices: Detailed Control Design Algorithms; Mathematical Proofs

Restricciones de acceso: Accesible sólo para usuarios de la UPV

Tipo recurso electrónico: Recurso a texto completo

Detalles del sistema: Forma de acceso: Web

**ISBN:** 9781846288937

Autores: Lee, Peter L.

Entidades: SpringerLink (Servicio en línea)

Enlace a formato físico adicional: Printed edition 9781846288920

Punto acceso adicional serie-Título: Advances in Industrial Control 1430-9491
