

Plant Endocytosis

[

Šamaj, Jozef

Springer Berlin Heidelberg,
2006

Monografía

Endocytosis is a fundamental biological process, which is conserved among all eukaryotes. It is essential not only for many physiological and signalling processes but also for interactions between eukaryotic cells and pathogens or symbionts. This book covers all aspects of endocytosis in both lower and higher plants, including basic types of endocytosis, endocytic compartments, and molecules involved in endocytic internalization and recycling in diverse plant cell types. It provides a comparison with endocytosis in animals and yeast and discusses future prospects in this new and rapidly evolving plant research field. Readers will find an overview of the state-of-the-art methods and techniques applied in plant endocytosis research

Título: Plant Endocytosis Recurso electrónico] edited by Jozef Šamaj, František Baluška, Diedrik Menzel

Editorial: Berlin, Heidelberg Springer Berlin Heidelberg 2006

Descripción física: X, 314 p. 39 illus., 5 in color. Also available online

Mención de serie: Plant Cell Monographs 1 Springer eBooks

Detalles del sistema: Forma de acceso: World Wide Web

ISBN: 9783540282198

Autores: Baluška, František Menzel, Diedrik

Entidades: SpringerLink
