Monografía

Technological improvements have greatly increased the ability of marine scientists to collect and analyze data over large spatial scales, and the resultant insights attainable from interpreting those data vastly increase understanding of population dynamics, evolution and biogeography. Marine Metapopulations provides a synthesis of existing information and understanding, and frames the most important future directions and issues. * First book to systematically apply metapopulation theory directly to marine systems *Contributions from leading international ecologists and fisheries biologists *Perspectives on a broad array of marine organisms and ecosystems, from coastal estuaries to shallow reefs to deep-sea hydrothermal vents *Critical science for improved management of marine resources *Paves the way for future research on large-scale spatial ecology of marine systems

Título: Marine metapopulations [Recurso electrónico] editors, Jacob P. Kritzer, Peter F. Sale

Editorial: Amsterdam Boston Elsevier Academic Press c2006

Descripción física: xxviii, 544 p., [4] p. of plates ill. (some col.), maps 24 cm

Mención de serie: Books on ScienceDirect

Bibliografía: Includes bibliographical references and index

Contenido: Preface -- Ch. 1:The Merging of Metapopulation Theory and Marine Ecology: Establishing the Historical Context -- Section I: Fishes -- Ch. 2:The Metapopulation Ecology of Coral Reef Fishes -- Ch. 3: Metapopulation Structure in Temperate Rock Reef Fishes -- Ch. 4:Estuarine and Diadromous Fish Metapopulations -- Section II: Invertebrates -- Ch. 5:Metapopulation Dynamics of Hard Corals -- Ch. 6:Population and Spatial Structure of Two Common Temperate Reef Herbivores: Abalone and Sea-Urchins -- Ch. 7:Rocky Intertidal Invertebrates: The Potential for Metapopulations Within and Among Shores -- Ch. 8:Metapopulation Dynamics of Coastal Decapods -- Ch. 9:A Metapopulation Approach to Interpreting Diversity at Deep-Sea Hydrothermal Vents -- Section III: Plants and Algae -- Ch.10:A Metapopulation Perspective on Patch Dynamics and Connectivity of Giant Kelp -- Ch.11: Seagrasses and the Metapopulation Concept: Developing a Regional Approach to the Study of Extinction, Colonization and Dispersal -- Section IV: Perspectives -- Ch.12: Conservation Dynamics of Marine

Metapopulations with Dispersing Larvae -- Ch.13: Genetic Approaches to Understanding Marine Metapopulation Dynamics -- Ch.14: Metapopulation Dynamics and Community Ecology of Marine Systems -- Ch.15: Metapopulation Ecology and Marine Conservation -- Ch.16: The Future of Metapopulation Science in Marine Ecology

Restricciones de acceso: Acceso restringido a miembros del Consorcio de Bibliotecas Universitarias de Andalucía

Detalles del sistema: Modo de acceso: World Wide Web

Fuente de adquisición directa: ScienceDirect (M)

ISBN: 9780120887811 0120887819

Materia: Marine ecology Animal populations Écologie marine Animaux- Populations

Autores: Kritzer, Jacob P. Sale, Peter F.
