Springer-Verlag, 1989

Llibres electrònics

Monografía

The shared purpose in this collection of papers is to apply the theory of self-adjoint extensions of symmetry operators in various areas of physics. This allows the construction of exactly solvable models in quantum mechanics, quantum field theory, high energy physics, solid-state physics, microelectronics and other fields. The 20 papers selected for these proceedings give an overview of this field of research unparalleled in the published literature; in particular the views of the leading schools are clearly presented. The book will be an important source for researchers and graduate students in mathematical physics for many years to come. In these proceedings, researchers and graduate students in mathematical physics will find ways to construct exactly solvable models in quantum mechanics, quantum field theory, high energy physics, solid-state physics, microelectronics and other fields

Título: Applications of self-adjoint extensions in quantum physics Recurs electrònic] proceedings of a conference held at the Laboratory of Theoretical Physics, JINR, Duna, USSR, September 29-October 1, 1987 P. Exner, P. Seba, eds

Editorial: Berlin New York Springer-Verlag 1989

Descripción física: 1 recurs electrònic (viii, 273 pages)

Tipo Audiovisual: Quantum theory Congresses Mathematical physics Congresses Mathematical physics. fast
Quantum theory. fast

Variantes del título: Self-adjoint extensions in quantum physics

Mención de serie: Lecture notes in physics 1616-6361 324

Bibliografía: Includes bibliographical references

Contenido: General Considerations -- Quantum Field Theory -- Random Point Defects -- Few-Body Problems --
Contact and Surface Phenomena -- Waveguides and Crystals

ISBN: 9783540461043 electronic bk.) 3540461043 electronic bk.) 038750883X 9780387508832

Autores: Exner, Pavel (1946-) Seba, P. (Petr) (1957-)

Punto acceso adicional serie-Título: Lecture notes in physics 324. 1616-6361 SpringerLink eBooks
