Monografía

This volume provides a comprehensive overview of advanced research in the field of efficient, clean and renewable energy production, conversion and storage. The ten chapters, written by internationally respected experts, address the following topics: (1) solar and wind energy; (2) energy storage in batteries; (3) biomass; and (4) socio-economic aspects of energy. Given its multidisciplinary approach, which combines environmental analysis and an engineering perspective, the book offers a valuable resource for all researchers and students interested in environmentally sustainable energy production, conversion, storage and its engineering

Título: Environment, Energy and Climate Change II Energies from New Resources and the Climate Change edited by Gilles Lefebvre, Elena Jiménez, Beatriz Cabañas

Edición: 1st ed. 2016

Editorial: Cham Springer International Publishing Imprint: Springer 2016

Descripción física: 1 recurso en línea XIV, 263 p. 102 illus., 54 illus. in color

Mención de serie: The Handbook of Environmental Chemistry 1867-979X 34 Springer eBooks

Contenido: Recursive Estimation Methods to Forecast Short-Term Solar Irradiation -- Technical and environmental analysis of parabolic trough Concentrating Solar Power (CSP) -- Wind power forecast error probabilistic model using Markov Chains -- Energy Storage Integration with Renewable Energies: the Case of

Concentration Photovoltaic Systems -- Batteries and Ultracapacitors based Energy Storage in Renewable Multi-Sources Systems -- Different Phase Change Materials Implementations for Thermal Energy Storage -- Bio-refineries: an Overview on Bio-Ethanol Production -- Effects of External Resistance on Microbial Fuel Cell's Performance -- The avocado and its waste: an approach of fuel potential/application -- Agency and Learning Relationships Against Energy Efficiency Barriers
