

Oxidative Stress and Hormesis in Evolutionary Ecology and Physiology [A Marriage Between Mechanistic and Evolutionary Approaches /

Costantini, David

Springer

Monografía

This book discusses oxidative stress and hormesis from the perspective of an evolutionary ecologist or physiologist. In the first of ten chapters, general historical information, definitions, and background of research on oxidative stress physiology, hormesis, and life history are provided. Chapters 2-10 highlight the different solutions that organisms have evolved to cope with the oxidative threats posed by their environments and lifestyles. The author illustrates how oxidative stress and hormesis have shaped diversity in organism life-histories, behavioral profiles, morphological phenotypes, and aging mechanisms. The book offers fascinating insights into how organisms work and how they evolve to sustain their physiological functions under a vast array of environmental conditions

Título: Oxidative Stress and Hormesis in Evolutionary Ecology and Physiology [Recurso electrónico] A Marriage Between Mechanistic and Evolutionary Approaches by David Costantini

Editorial: New York [etc.] Springer

Descripción física: XVII, 348 p. 50 il., 14 il. en color

Contenido: Historical and Contemporary Issues of Oxidative Stress, Hormesis and Life History Evolution -- Early Life Hormesis and Oxidative Experiences Fine-Tune the Adult Phenotype -- Variation in Oxidative Stress Threats and Hormesis Across Environments -- Nutritional Ecology, Foraging Strategies and Food Selection -- Coping with Physical Activity and Inactivity -- The Costs of Makeup in Sexual Selection and Social Signalling -- The Role of Oxidative Stress and Hormesis in Shaping Reproductive Strategies from Mating Systems to Parental Care -- Combating Parasites: Immune Response and Inflammation -- Variation Within and Among Species in Resistance to

Oxidative Stress and Hormetic Responses -- Integrating Oxidative Stress and Hormesis into Research on Senescence and Survival Perspectives
