Monografía

"The signals are everywhere that our planet is experiencing significant climate change. It is clear that we need to reduce the emissions of carbon dioxide and other greenhouse gases from our atmosphere if we want to avoid greatly increased risk of damage from climate change. Aggressively pursuing a program of emissions abatement or mitigation will show results over a timescale of many decades. How do we actively remove carbon dioxide from the atmosphere to make a bigger difference more quickly? As one of a two-book report, this volume of Climate Intervention discusses CDR, the carbon dioxide removal of greenhouse gas emissions from the atmosphere and sequestration of it in perpetuity. Climate Intervention: Carbon Dioxide Removal and Reliable Sequestration introduces possible CDR approaches and then discusses them in depth. Land management practices, such as low-till agriculture, reforestation and afforestation, ocean iron fertilization, and land-and-ocean-based accelerated weathering, could amplify the rates of processes that are already occurring as part of the natural carbon cycle. Other CDR approaches, such as bioenergy with carbon capture and sequestration, direct air capture and sequestration, and traditional carbon capture and sequestration, seek to capture CO<sub>2</sub> from the atmosphere and dispose of it by pumping it underground at high pressure. This book looks at the pros and cons of these options and estimates possible rates of removal and total amounts that might be removed via these methods. With whatever portfolio of technologies the transition is achieved, eliminating the carbon dioxide emissions from the global energy and transportation systems will pose an enormous technical, economic, and social challenge that will likely take decades of concerted effort to achieve. Climate Intervention: Carbon Dioxide Removal and Reliable Sequestration will help to better understand the potential cost and performance of CDR strategies to inform debate and decision making as we work to stabilize and reduce atmospheric concentrations of carbon dioxide."--

**Título:** Climate intervention [Recurso electrónico] carbon dioxide removal and reliable sequestration Committee on Geoengineering Climate, Technical Evaluation and Discussion of Impacts, Board on Atmospheric Sciences and Climate, Ocean Studies Board, Division on Earth and Life Studies, National Research Council of the National Academies

**Descripción física:** 1 online resource (154 pages) color illustrations, color maps

**Mención de serie:** E-Libro

**Nota general:** Description based on print version record

**Bibliografía:** Includes bibliographical references (pages 113-127)

**Contenido:** Carbon Dioxide Removal -- Assessment of Possible Carbon Dioxide Removal and Long-Term Sequestration Systems -- Social Context -- Way Forward -- Appendix

**Versión original:** Print version: Climate intervention : carbon dioxide removal and reliable sequestration.

Washington, District of Columbia : The National Academies Press, [2015] xiv, 140 pages ; 26 cm., 9780309305297 (OCoLC)ocn911501270 (DLC) 2015938933

**Detalles del sistema:** Modo de acceso: World Wide Web

**Fuente de adquisición directa:** E-Libro

**ISBN:** 9780309305297 pbk.) 0309305292 pbk.) 9780309305303 e-book)

**Entidades:** National Research Council (U.S.). Ocean Studies Board sponsor National Research Council (U.S.).

Board on Atmospheric Science and Climate sponsor National Research Council (U.S.). Committee on

Geoengineering Climate, Technical Evaluation and Discussion on Impact creator
