Título: Microprocessor-Based Control Systems [electronic resource] edited by Naresh K. Sinha

Descripción física: 428p. online resource

Mención de serie: International Series on Microprocessor-Based Systems Engineering 4

Documento fuente: Springer eBooks

Contenido: 1 Microprocessors in Control Systems — Outline of the Book -- Outline of the book -- References -- 2 Some Aspects of Microprocessor-Based Control and Identification -- Implementation of simple classical control techniques -- Motion control system -- On-line parameter identification in continuous dynamical systems -- References -- 3 Self-Tuning and Adaptive Control -- General plant and predictor models -- Predictive control -- Parameter estimation -- Self-tuning -- Implementation and use -- PID self-tuners -- Conclusions -- References -- 4 Adaptive Control of Synchronous Machine Excitation -- Adaptive control -- Adaptive controllers for power systems -- Microcomputer implementation of adaptive controller -- Experimental results -- Adaptive controller with variable forgetting factor and self-searching pole-shift -- Concluding remarks -- References -- 5 Microprocessor-Based System Identification by Signal Compression Method -- Principle of the signal compression method -- Example of the measuring procedure -- Applications -- References -- 6 Digital System Controllers for Exact Model Signal Tracking -- System models -- Step-invariant controller design -- Step-invariant design example -- Deadbeat controllers for step-varying systems -- Conclusion -- References -- 7 Microprocessor-Based Control of DC Motors -- System description -- Selection of the desired closed-loop pole positions -- Application -- Programming -- Conclusion -- References -- 8 Microprocessor-Based AC Motor Control -- Adjustable speed AC motor drives -- Signal processing using a microprocessor and peripheral ICs -- AC motor drives with microprocessors -- Conclusion -- References -- 9 Microprocessor-Based Nonlinear Controller for the Roll Motion of a Model Aircraft -- Roll motion equation -- Proposed nonlinear control scheme -- Microprocessor implementation of the controller -- Roll motion simulation results -- Conclusions -- Appendix A -- Appendix B -- References -- 10 A Microprocessor-Based Control System for a Glass Furnace -- Process description -- Modelling -- Control of the melting furnace -- Computer control systems in the glass industry -- A microcomputer system for a glass furnace -- Conclusions -- References -- 11 Multi-processor robot control system using Microprogramming -- Control of robotic system -- Multilevel structure of robot control system -- Architecture of multiprocessor robot control system -- Microprogrammable architecture of executive level of robot control system -- The algorithms of the microprogramme control of the robot control system executive level -- Conclusion -- References -- 12 Computer Control System for the Training Simulator -- Design of model following servo system -- Dynamics of simulator --

Experiment -- Conclusion -- References -- Appendix A -- 13 Microcontrol-Based Direct Numerical Control -- Principles of numerical control -- DNC system design and implementation -- Conclusions -- References -- 14 Microprocessor-Based Repetitive Control -- Principle of repetitive control -- Configuration and properties of modified repetitive control system -- Design principle and implementation of repetitive control system -- Application -- Conclusion -- References -- 15 Real-Time Programming Languages for Process Control -- Pascal -- Concurrent Pascal -- Modula-2 -- Ada -- FORTH -- Conclusion -- References -- 16 Industrial Lan using Distributed Microprocessors -- Microprocessor hardware -- Kernel executive -- Conclusions and recommendations -- References -- 17 Microcomputer-Embedded Distributed Control of a Switching and Communication System -- The evolution of switching and communication systems -- Distributed control of a switching and communication system -- Control and implementation of the distributed communication system -- The dynamic aspect of the system -- Software structure of the distributed communication system -- Conclusion and future directions -- References -- 18 Microprocessor-based data reduction and Compression systems -- Data reduction via piecewise linear approximation algorithms -- Data compression via orthogonal transforms: The fast Walsh transform case -- Conclusions -- References

ISBN: 9789400947085

Materia: Engineering Computer engineering Engineering Electrical Engineering

Entidades: SpringerLink (Online service)

Enlace a formato físico adicional: Printed edition 9789401085946

Punto acceso adicional serie-Título: International Series on Microprocessor-Based Systems Engineering 4
