2017

Monografía

The papers presented in this volume address diverse challenges in energy systems, ranging from operational to investment planning problems, from market economics to technical and environmental considerations, from distribution grids to transmission grids and from theoretical considerations to data provision concerns and applied case studies. The International Symposium on Energy System Optimization (IESO) was held on November 9th and 10th 2015 at the Heidelberg Institute for Theoretical Studies (HITS) and was organized by HITS, Heidelberg University and Karlsruhe Institute of Technology

Título: Advances in Energy System Optimization Recurso electrónico-En línea] :] Proceedings of the first International Symposium on Energy System Optimization edited by Valentin Bertsch, Wolf Fichtner, Vincent Heuveline, Thomas Leibfried

Editorial: Cham Springer International Publishing Imprint: Birkhäuser 2017

Descripción física: VIII, 245 p. 86 illus., 67 illus. in color. online resource

Tipo Audiovisual: Mathematics Calculus of variations Operations research Management science Mathematics Calculus of Variations and Optimal Control; Optimization Operations Research, Management Science

Mención de serie: Trends in Mathematics 2297-0215

Documento fuente: Springer eBooks

Nota general: Mathematics and Statistics (Springer-11649)

Contenido: 1. A Customized Evolutionary Algorithm for the Optimization of Residential Energy Resources -- 2. Comparison of control strategies for electric vehicles on a low voltage level electrical distribution grid -- 3. Optimal Storage Operation with Model Predictive Control in the German Transmission Grid -- 4. Security-Constrained Optimization Framework for Large-Scale Power Systems Including Post-Contingency Remedial Actions and Inter-Temporal Constraints -- 5. Dynamic Decision Making in Energy Systems with Storage and Renewable Energy Sources -- 6. Dispatch of flexibility options, grid infrastructure and integration of renewable energies within a decentralized electricity system -- 7. An Optimal Investment Model for Battery Energy Storage Systems in Isolated Microgrids -- 8. A dynamic programming approach to multi-period planning of isolated microgrids -- 9. Curtailing renewable feed-in peaks and its impact on power grid extensions in Germany for the year 2030 -- 10. Simulation of distribution grid expansion costs and the impact of load shifting -- 11. Structure Analysis of the German Transmission Network using the Open Source Model SciGRID -- 12. Modeling of the transmission grid using geo allocation and generalized processes -- 13. Regionalizing Input Data for Generation and Transmission Expansion Planning Models -- 14. Convexity/nonconvexity certificates for power flow analysis -- 15. A Convex Model for the Optimization of Distribution Systems with Distributed Generation.-.
