Monografía

The series Topics in Current Chemistry presents critical reviews of the present and future trends in modern chemical research. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field. Review articles for the individual volumes are invited by the volume editors. Readership: research chemists at universities or in industry, graduate students

Título: Site-Selective Catalysis [Recurso electrónico] edited by Takeo Kawabata

Mención de serie: Topics in Current Chemistry 372

Contenido: Catalyst-controlled regioselective reactions of carbohydrate derivatives -- Site-selective conjugate addition through catalytic generation of ion-pairing intermediates -- Ligand-Controlled Site-Selective Cross-Coupling -- Site-Selective C-H Functionalization of Alcohols via Chemoselective Dehydrogenation -- Site-selective peptide/protein degradation -- Site-selective Functionalization of Carbohydrates -- Site-Selective Alterations of Complex Molecules with Peptide-Based Catalysts

Restricciones de acceso: Acceso restringido a miembros del Consorcio de Bibliotecas Universitarias de Andalucía

Detalles del sistema: Modo de acceso: world wide web

Fuente de adquisición directa: Springer (e-Books)

ISBN: 9783319263335 9783319263311

Autores: Kawabata, Takeo

Punto acceso adicional serie-Título: Topics in Current Chemistry 372
