2016

Monografía

Extracellular Matrix-Derived Implants in Clinical Medicine comprehensively covers the emergence of tissue engineering and regenerative medicine over the past few decades, along with discussions of continuous funding and research. The book provides a state-of-the-art review of this increasingly important technology and how it is translating from bench to bedside. Part One of the book looks at the historical use of human and animal tissues, focusing on the main application areas, including cardiovascular, hard and soft tissue engineering, and neurological, while Part Two examines the challenges in harvesting, processing, and manufacturing of extracellular matrices, with a final section reviewing the international regulatory environment and economics of tissue-based products

Título: Extracellular matrix-derived implants in clinical medicine [Recurso electrónico] edited by Daniel L. Mooradian

Editorial: Duxford, UK Woodhead Publishing is an imprint of Elsevier 2016

Mención de serie: Science Direct e-books Woodhead Publishing series in biomaterials number 113

Nota general: Incluye índices Descripción basada en el recurso electrónico; tít. tomado del PDF (ScienceDirect, visitado en Junio 2, 2016)

Detalles del sistema: Forma de acceso: World Wide Web

ISBN: 9780081002193 008100219X 9780081001660 print) 0081001665 print)

Autores: Mooradian, Daniel L., ed

Punto acceso adicional serie-Título: Woodhead Publishing series in biomaterials no. 113
