Monografía

ASP.NET 2.0 is the latest version of Microsoft's current ASP.NET 1.1 technology, which is fast becoming the accepted technology standard for creating dynamic web pages on the Windows platform. I is now used across the board from start-ups to blue-chip multi-national corporations. ASP.NET 2.0 is building on this solid foundation and adding new improvements. The new technology will be faster to code, offer a more powerful set of tools (for example MasterPages and Generics) and will also run quicker when deployed, so that customers enjoy a significantly better user experience
