Monografía

Businesses today want actionable insights into their data they want their data to reveal itself to them in a natural and user friendly form. What could be more natural than human language? Natural language search is at the center of a storm of ever increasing web driven demand for human computer communication and information access. SQL Server 2008 provides the tools to take advantage of the features of its built in enterprise level natural language search engine in the form of Integrated Full Text Search (iFTS). Integrated Full Text Search uses text aware relational queries to provide your users with fast access to content. Whether you want to set up an enterprise wide Internet or intranet search engine or create less ambitious natural language search applications, this book will teach you how to get the most out of SQL Server 2008 Integrated Full Text Search
