

Behavioral pediatric healthcare for nurse practitioners : a growth and developmental approach to intercepting abnormal behaviors /

Hallas, Donna,
editor

Electronic books

Monografía

"Written for practicing pediatric and family nurse practitioners, and PNP and FNP students, this pediatric primary care text expands on the crucial role of the healthcare provider to assess, identify, and intercept potential behavioral health problems. All parents want to see their child become a socially and emotionally healthy adult, but this cannot be the outcome for every family. When children miss their anticipated milestones, parents and the family dynamic is upset; parents question their parenting skills and their ability to raise a socially and emotionally healthy child. The content in this book is built on strategic, evidence-based measures to evaluate and treat behavioral health during each well-child visit across the pediatric life span and restore order to their patients and their families. Behavioral Pediatric Healthcare for Nurse Practitioners is organized by developmental stages: infancy, toddlers, preschool-age, school-age, and adolescence. Each of these stages contains common behavioral problems and details their assessment, screening, intervention, and treatment. Chapters also include measurable standards for behavioral health and special topics in pediatric behavioral health and chronic medical conditions as they impact development. Every section features a case study that fosters critical thinking and demonstrates exemplary practices"--Publisher's description
