Monografía

Microsystems are an important success factor in the automobile industry. In order to fulfil the customers requests for safety convenience and vehicle economy, and to satisfy environmental requirements, microsystems are becoming indispensable. Thus a large number of microsystem applications came into the discussion. With the international conference AMAA '99, VDI/VDE-IT provides a platform for the discussion of all MST relevant components for automotive applications. The conference proceedings gather the papers by authors from automobile suppliers and manufacturers

Título: Advanced microsystems for automotive applications 99 Detlef E. Ricken, Wolfgang Gessner (eds.).

Editorial: Berlin New York Springer ©1999

Descripción física: 1 online resource (x, 319 pages) illustrations

Mención de serie: Springer and the environment

Bibliografía: Includes bibliographical references

Contenido: Microsystems for Automotive Applications -- Session 1: Microsystems for Traffic Management and Communication -- Intelligent Car Communication Systems -- The Application of PC Technology in Automobiles -- Advanced Microphones for Handsfree Communication and Voice Recognition -- Using In-Vehicle Systems and 5,8 GHz DSRC to Improve Driver Safety and Traffic Management -- Session
