Monografía

From the reviews: " ... an efficient reference book for many fundamental techniques of Riemannian geometry. ... despite its length, the reader will have no difficulty in getting the feel of its contents and discovering excellent examples of all interaction of geometry with partial differential equations, topology, and Lie groups. Above all, the book provides a clear insight into the scope and diversity of problems posed by its title." S.M. Salamon in MathSciNet 1988 "It seemed likely to anyone who read the previous book by the same author, namely "Manifolds all of whose geodesic are closed", that the present book would be one of the most important ever published on Riemannian geometry. This prophecy is indeed fulfilled." T.J. Wilmore in Bulletin of the London Mathematical Society 1987

Título: Einstein Manifolds Arthur L. Besse

Edición: "Reprint of the 1987 ed."

Editorial: Berlin [New York] Springer ©2008

Descripción física: 1 online resource (xii, 516 pages) illustrations

Mención de serie: Classics in mathematics 1431-0821

Nota general: "Originally issued as vol. 10 of the *Ergebnisse der Mathematik und ihrer Grenzgebiete*, 3rd series"--
Page [iii]

Bibliografía: Includes bibliographical references (pages 479-499) and index

Contenido: Introduction -- Basic Material -- Basic Material: Khler Manifolds -- Relativity -- Riemannian Functionals -- Ricci Curvature as a Partial Differential Equation -- Einstein Manifolds and Topology -- Homogeneous Riemannian Manifolds -- Compact Homogeneous Khler Manifolds -- Riemannian Submersions -- Holonomy Groups -- Khler-Einstein Metrics and the Calabi Conjecture -- The Moduli Space of Einstein Structures -- Self-Duality -- Quaternion-Khler-Manifolds -- A Report on the Non-Compact Case -- Generalizations of the Einstein Condition -- Appendix. Sobolev Spaces and Elliptic Operators -- Addendum -- Bibliography -- Notation Index -- Subject Index

Lengua: English
