Monografía

The Illustrated Handbook of Succulent Plants represents the first comprehensive taxonomic treatment of succulents in thirty years. It covers over 9000 taxa of all succulents except Cactaceae. The Crassulaceae (stonecrop family) volume presents the first complete treatment of the family for many decades. The family is a very diverse group, and plants range from tiny insignificant annual herbs to perennial shrubs and trees. Many of the species have attractive flowers. The entire family consists of 33 genera and 23 hybrid genera with a total of 1410 species and 305 infraspecific taxa. The largest genus is *Sedum* (stonecrop, wallpepper) with 428 species. Other large genera are *Aeonium* (36 species), *Crassula* (195 species), *Dudleya* (47 species), *Echeveria* (139 species), *Kalanchoe* (144 species), *Rhodiola* (58 species), *Sempervivum* (63 species), and *Tylecodon* (46 species). A key to all genera is included. The descriptions of all accepted taxa are supplemented with typification and distribution data, full synonymy, literature references and 341 colour photos
