Título: Classical Potential Theory and Its Probabilistic Counterpart Recurso electrónico] by Joseph L. Doob

Editorial: Berlin, Heidelberg Springer Berlin Heidelberg Imprint: Springer 2001

Descripción física: L, 1551 p. online resource

Tipo Audiovisual: Distribution (Probability theory) Mathematics Potential Theory Potential theory (Mathematics)
Probability Theory and Stochastic Processes

Mención de serie: Classics in Mathematics 1431-0821

Contenido: From the contents: Introduction -- Notation and Conventions -- Part I Classical and Parabolic Potential Theory: Introduction to the Mathematical Background of Classical Potential Theory; Basic Properties of Harmonic, Subharmonic, and Superharmonic Functions; Infirma of Families of Suerharmonic Functions; Potentials on Special Open sets; Polar sets and Their Applications; The Fundamental Convergence Theorem and the Reduction Operation; Green Functions; The Dirichlet Problem for Relative Harmonic Functions; Lattices and Related Classes of Functions; The Sweeping Operation, The Fine Topology; The Martin Boundary; Classical Energy and Capacity; One-Dimensional Potential Theory -- Part II Probabilistic Counterpart of Part I..... -- Part III Lattices in Classical Potential Theory and Martingale Theory; Brownian Motion and the PWB Method; Brownian Motion on the Martin Space -- Appendixes

ISBN: 9783642565731

Entidades: SpringerLink (Online service)
