

Forecasting, structural time series models, and the Kalman filter /

Harvey, A. C. (Andrew C.)

Cambridge University Press, 1989

Monografía

This book is concerned with modelling economic and social time series and with addressing the special problems which the treatment of such series pose

<https://rebiunoda.pro.baratznet.cloud:28443/OpacDiscovery/public/catalog/detail/b2FpOmNlbGVicmF0aW9uOmVzLmJhcmF0ei5yZW4vMjM4MTcyODU>

Título: Forecasting, structural time series models, and the Kalman filter Andrew Harvey

Editorial: Cambridge New York Cambridge University Press 1989

Descripción física: 1 recurso electrónico

Mención de serie: CUP ebooks

Bibliografía: Incluye referencias bibliográficas (p. 529-542) e índices

Contenido: Cover; Half Title; TitlePage; Copyright; Contents; List of figures; Acknowledgement; Preface; Notation and conventions; List of abbreviations; 1 Introduction; 1.1 The nature of time series; 1.2 Explanatory variables and intervention analysis; 1.3 Multivariate models; 1.4 Statistical treatment; 1.5 Modelling methodology; 1.6 Forecasting; 1.7 Computer software; 2 Univariate time series models; 2.1 Introduction; 2.2 Ad hoc forecasting procedures; 2.3 The structure of time series models; 2.4 Stochastic properties; 2.5 ARIMA models and the reduced form; 2.6 ARIMA modelling; 2.7 Applications Exercises3 State space models and the Kalman filter; 3.1 The state space form; 3.2 The Kalman filter; 3.3 Properties of time-invariant models; 3.4 Maximum likelihood estimation and the prediction errordecomposition; 3.5 Prediction; 3.6 Smoothing; 3.7 Non-linearity and non-normality; Appendix. Properties of the multivariate normal distribution; Exercises; 4 Estimation, prediction and smoothing for univariate structuraltime series models; 4.1 Application of the Kalman filter; 4.2 Estimation in the time domain; 4.3 Estimation in the frequency domain; 4.4 Identifiability 4.5 Properties of estimators4.6 Prediction; 4.7 Estimation of components; Exercises; 5 Testing and model selection; 5.1 Principles of testing; 5.2 Lagrange multiplier tests; 5.3 Tests of specification for structural models; 5.4 Diagnostics; 5.5 Goodness of fit; 5.6 Post-sample predictive testing and model evaluation; 5.7 Strategy for model selection; Exercises; 6 Extensions of the univariate model; 6.1 Trends, detrending and unit roots; 6.2 Seasonality and seasonal adjustment; 6.3 Different timing intervals for the model and observations; 6.4 Data irregularities 6.5 Time-varyingand non-linear models6.6 Non-normality, count data and qualitative observations; Exercises; 7 Explanatory variables; 7.1 Introduction; 7.2 Estimation in the

frequency domain; 7.3 Estimation of models with explanatory variables and structural time series components; 7.4 Tests and measures of goodness of fit; 7.5 Model selection strategy and applications; 7.6 Intervention analysis; 7.7 Time-varying parameters; 7.8 Instrumental variables; 7.9 Count data; Exercises; 8 Multivariate models; 8.1 Stochastic properties of multivariate models 8.2 Seemingly unrelated time series equations 8.3 Homogeneous systems; 8.4 Testing and model selection; 8.5 Dynamic factor analysis; 8.6 Intervention analysis with control groups; 8.7 Missing observations, delayed observations and contemporaneous aggregation; 8.8 Vector autoregressive models; 8.9 Simultaneous equation models; Exercises; 9 Continuous time; 9.1 Introduction; 9.2 Stock variables; 9.3 Flow variables; 9.4 Multivariate models; Appendix 1 Principal structural time series components and models; Appendix 2 Data sets; A. Energy demand of Other Final Users
