Monografía

Computer architecture deals with the physical configuration, logical structure, formats, protocols, and operational sequences for processing data, controlling the configuration, and controlling the operations over a computer. It also encompasses word lengths, instruction codes, and the interrelationships among the main parts of a computer or group of computers

Título: Advanced computer architecture and parallel processing Hesham El-Rewini, Mostafa Abd-El-Barr

Editorial: Hoboken, N.J. John Wiley ©2005

Descripción física: 1 online resource (xiii, 272 pages) illustrations

Mención de serie: Wiley series on parallel and distributed computing

Nota general: "Wiley-Interscience."

Bibliografía: Includes bibliographical references and index

Contenido: Introduction to advanced computer architecture and parallel processing -- Multiprocessors interconnection networks -- Performance analysis of multiprocessor architecture -- Shared memory architecture -- Message passing architecture -- Abstract models -- Network computing -- Parallel programming in PVM -- Message Passing Interface (MPI) -- Scheduling and task allocation

Lengua: English
