

Quantum-statistical models of hot dense matter : methods for computation opacity and equation of state /

Nikiforov, A. F.

Birkhäuser Verlag,
2005

Electronic books

Monografía

"The widely used theoretical models for calculating properties of hot dense matter are studied in this book. Calculations using the presented formulas and algorithms are illustrated by plots, tables, and also are compared with experimental results. The purpose is to help to understand atomic physics in hot plasma and to develop efficient and robust computer codes for calculating opacity and equations of state for arbitrary material in a wide range of temperatures and densities."--Jacket

Título uniforme: Kvantovo-statisticheskie modeli vysokotemperurnoi plazmy. English

Título: Quantum-statistical models of hot dense matter methods for computation opacity and equation of state A.F. Nikiforov, V.G. Novikov, V.B. Uvarov ; translated from the Russian by Andrei Iacob

Editorial: Basel Boston Birkhäuser Verlag 2005

Descripción física: 1 online resource (xvii, 428 pages) illustrations

Mención de serie: Progress in mathematical physics v. 37

Bibliografía: Includes bibliographical references (pages 409-426) and index

Contenido: Preliminaries; Contents; 1 The generalized Thomas Fermi model; 2 Electron wave functions in a given potential; 3 Quantum statistical self consistent field models; 4 The Hartree Fock Slater model for the average atom; 5 Interaction of radiation with matter; 6 The equation of state; Bibliography; Index
