Monografía

As with any rapid technological development, the biotechnology revolution is putting great strains on the ability of law to adapt to new challenges and threats. Although there is general agreement on the need to regulate biotechnology in many different fields of human activity (agriculture, life sciences, forensic science) domestic law remains deeply divided over the best approach to take. This book is the first attempt at covering the most pressing legal issues raised by the impact of biotechnologies on different categories of international norms. Through the contribution of a selected group
