Título: Handbook of numerical analysis. Volume IX Numerical methods for fluids (part 3) electronic resource] general editors, P.G. Ciarlet, J.L. Lions

Editorial: Amsterdam Boston Elsevier 2003

Descripción física: 1 online resource (1187 p.)

Mención de serie: Handbook of Numerical Analysis

Nota general: Description based upon print version of record

Bibliografía: Includes bibliographical references and indexes

Contenido: Front Cover; Numerical Methods for Fluids (Part 3); Copyright Page; Contents; Preface; Chapter I. The Navier-Stokes Equations for Incompressible Viscous Fluids; Introduction: Synopsis; 1. Derivation of the Navier-Stokes equations for viscous fluids; 2. Initial and boundary conditions; 3. A stream function-vorticity formulation of the Navier-Stokes equations; 4. A brief introduction to Sobolev spaces; 5. Variational formulations of the Navier-Stokes equations; 6. A short review of mathematical results for the Navier-Stokes equations Chapter II. A Family of Operator-Splitting Methods for Initial Value Problems. Application to the Navier-Stokes Equations Introduction: Synopsis; 7. A family of initial value problems; 8. The Peaceman-Rachford method; 9. The Douglas-Rachford method; 10. A θ -scheme; 11. Application to the Navier-Stokes equations; 12. Further comments; Chapter III. Iterative Solution of the Advection-Diffusion Subproblems; Introduction: Synopsis; 13. Classical and variational formulations of the advection-diffusion subproblems associated with the operator splitting schemes 14. Linear variational problems in Hilbert spaces 15. Variational methods for the solution of the advection-diffusion problems (13.1) and (13.2); 16. Conjugate gradient methods for the solution of minimization problems in Hilbert spaces; 17. Least squares solution of linear and nonlinear problems in Hilbert spaces; 18. Least-squares /conjugate gradient solution of problems (13.1) and (13.2); Chapter IV. Iterative Solution of the Stokes

Subproblems; Introduction: Synopsis; 19. Mathematical properties of the generalized Stokes problem (GS)1; 20. Gradient methods for the Stokes problem 21. Conjugate gradient methods for the Stokes problem (GS)122. Iterative solution of the generalized Stokes problem (GS)2; 23. On artificial compressibility methods and further comments; Chapter V. Finite Element Approximation of the Navier-Stokes Equations; Introduction: Synopsis; 24. Solution of the Stokes problem with periodic boundary conditions; 25. A Fourier analysis of the numerical instability mechanism; 26. Finite element methods for the Stokes problem; 27. Finite element implementation of the θ -scheme (11.5)-(11.8); 28. On the numerical solution of the discrete subproblems 29. Further comments and complements Chapter VI. Treatment of the Advection by a Wave-Like Equation Method and by Backward Methods of Characteristics; Introduction: Synopsis; 30. More on operator-splitting methods; 31. A wave-like equation method for solving the Navier-Stokes equations; 32. Solution of the Navier-Stokes equations by backward methods of characteristics; 33. On the treatment of the advection by upwinding. Final comments; Chapter VII. On L2-Projection Methods for the Numerical Treatment of the Incompressibility; Introduction: Synopsis 34. Combining L2-projection methods with operator-splitting schemes à la Peaceman-Rachford and Douglas-Rachford, and with the θ -scheme

Lengua: English

ISBN: 1-281-11968-7 9786611119683 0-08-050794-8

Materia: Numerical analysis Mathematics

Autores: Ciarlet, P. G. Lions, J.-L. (Jacques-Louis) (1928-2001.)

Enlace a formato físico adicional: 0-444-51224-1
