

Optical guidance systems for architectural lighting design /

García Fernández, Berta

Ediciones Complutense,
2021

Monografía

The increasing consideration of research and technological development in fields such as energy and new advanced materials, along with the environment and health creates great interest regarding the integration of natural lighting in the architecture. This book covers a wide range of study of techniques and design analysis of optical guide systems for architectural lighting design providing a quantitative estimation of the influence of numerous factors that affect the transport of light in hollow light guides in order to contribute to the prediction of performance. Furthermore, it is presented a detailed analysis of guided light in optical systems such as hollow prismatic guides together with the development of new mathematical models and methodologies that facilitate the prediction of transported luminous flux and efficiency of systems

Título: Optical guidance systems for architectural lighting design Berta García Fernández, Daniel Vázquez-Moliní, Antonio Álvarez Fernández-Balbuena, Víctor Echarri Iribarren, Joaquín Solbes Llorca

Editorial: Madrid Ediciones Complutense 2021

Descripción física: 152 p. il

Mención de serie: Serie investigación 42

ISBN: 978-84-669-3711-5

Materia: Iluminación eléctrica Iluminación de interiores Iluminación arquitectónica y decorativa

Autores: García Fernández, Berta

Punto acceso adicional serie-Título: Serie investigación (Complutense) 42
