Título: Alzheimer's disease cellular and molecular aspects of amyloid [beta] edited by J. Robin Harris and Falk Fahrenholz

Editorial: New York Springer 2005

Descripción física: 1 online resource (xv, 409 pages) illustrations

Mención de serie: Subcellular biochemistry 0306-0225 v. 38

Documento fuente: Springer e-books

Bibliografía: Includes bibliographical references and index

Contenido: The Contribution of Microscopy to the Study of Alzheimer's Disease, Amyloid Plaques and A β Fibrillogenesis -- Transgenic Mouse Models for APP Processing and Alzheimer's Disease: Early and Late Defects -- Oxidative stress in Alzheimer's Disease: Implications for Prevention and Therapy -- γ -Secretase, APP and A β in Alzheimer's Disease -- The Non-Amyloidogenic Pathway: Structure and Function of γ -Secretases -- Amyloid β Degradation: A Challenging Task for Brain Peptidases -- The Protective Role of Vitamin E in Vascular Amyloid β -Mediated Damage -- Amyloid Accumulation and Pathogenesis of Alzheimer's Disease: Significance of Monomeric, Oligomeric and Fibrillar A β -- Cholesterol and Amyloid β Fibrillogenesis -- Alzheimer's β -Amyloid: Insights into Fibril Formation and Structure from Congo Red Binding -- The Aluminium-Amyloid Cascade Hypothesis and Alzheimer's Disease -- Amyloid- β Metal Interaction and Metal Chelation -- The Interaction of Amyloid- β with ApoE -- Clusterin and Alzheimer's Disease -- Acetylcholinesterase Interaction with Alzheimer Amyloid β -- Membrane Disordering Effects of β -Amyloid Peptides -- The Role of Alzheimer A β Peptides in Ion Transport

Across Cell Membranes -- Amyloid Inhibitors and β -Sheet Breakers -- Cholesterol and Alzheimer's Disease: Statins, Cholesterol Depletion in APP Processing and A β Generation -- Phosphorylated Amyloid- β : the Toxic Intermediate in Alzheimer's Disease Neurodegeneration
