Título: Current protocols in bioinformatics

Editorial: New York Wiley [2002]-

Descripción física: 1 online resource

Periodicidad actual: Updated quarterly

Fechas de publicación: Began with 2002; ceased with Volume 72, issue 1 (December 2020)

Nota general: Editorial board: Andreas D. Baxevanis [and others] Title from caption on opening page of database (viewed Oct. 19, 2006) Updated by quarterly supplements

Restricciones de acceso: Access restricted to subscribers

Tipo recurso electrónico: Articles in Text (HTML) and PDF

Detalles del sistema: Mode of access: World Wide Web

Relación compleja: Merged with: Current protocols in cell biology; and: Current protocols in chemical biology; and: Current protocols in cytometry; and: Current protocols essential laboratory techniques; and: Current protocols in human genetics; and: Current protocols in immunology; and: Current protocols in microbiology; and: Current protocols in molecular biology; and: Current protocols in mouse biology; and: Current protocols in neuroscience; and: Current protocols in nucleic acid chemistry; and: Current protocols in pharmacology; and: Current protocols in plant biology; and: Current protocols in protein science; and: Current protocols in stem cell biology; and: Current protocols in toxicology; to form: Current protocols

ISSN: 1934-340X

Materia: Bioinformatics- Laboratory manuals Nucleotide sequence- Laboratory manuals Amino acid sequence- Laboratory manuals Base Sequence Amino Acid Sequence Computational Biology- methods Databases, Genetic Proteins- analysis Sequence Analysis- methods Sequence Homology Amino acid sequence. Bioinformatics. Nucleotide sequence.

Autores: Baxevanis, Andreas D.

Enlace a subserie: Current protocols in bioinformatics (CKB)111091830226018 0-471-25095-3

Enlace a formato físico adicional: 1934-3396

Enlace a título posterior: Current protocols
