

El gasto público en políticas activas de empleo en España [

2021

text (article)

Analítica

Active labour market policies are considered fundamental to favour the increase in employment and the reduction of unemployment. The objective of this paper is to examine public expenditure in these policies, the budgetary effort they represent, their scope and effectiveness. The amounts and their distribution among the different measures adopted in the years 2004- 2019 have been examined. The results obtained make it possible to distinguish two sub-periods. Between 2004 and 2012, public expenditure is mostly allocated to employment incentives and training. On the other hand, between 2013 and 2019, there is a greater distribution of resources between the different types of actions. They also show that the budgetary effort in terms of gross domestic product is between 0.52% and 0.84%, and that the scope of public expenditure on active policies in relation to the unemployment rate is between 0.02 and 0.08. It is also observed that this expenditure and the number of employees is positively correlated. It is concluded that the budgetary effort is relatively small, and the scope is reduced, although public expenditure on active policies favours employment moderately during the period considered
