

GenTAI: generador de tests adaptativos informatizados [

2005

text (article)

Analítica

This paper presents a tool that allows the automatic generation of experimental or minor Computerized Adaptive Tests from an item bank that is calibrated by means of the 3-parameter logistic Item Response Theory model. GenTAI is a friendly, easy-to-use, intuitive, portable, scalable, highly configurable and strongly documented software, that fulfils the goals of an adaptive testing at the same time. Some similar systems do not offer enough quality in their interfaces and have a lack of proper ways to interact with the user. GenTAI includes a new feature that allows the user to perform simulations to assess or compare the measurement errors obtained after test administrations
