

## Los retos jurídicos de la inteligencia artificial en el derecho en Colombia [

2021

text (article)

Analítica

At present, Artificial Intelligence (AI) is an element that is an active part within the legal systems in various countries of the world, and in Colombia some approaches have been made for some years; The above, because the human being has always tried to create tools that make life easier for him and that perform for him those operational and procedural functions that allow him to dedicate his working time to the activities of the essence of the sciences or disciplines in those that are carried out, and it is precisely there, where technology has played a transcendental role in the creation of types of intelligence that satisfy this need while also trying to generate a service for third parties. Due to this, the central objective of this research was to describe the legal panorama of AI, with respect to the legal acts of civil, labor, commercial and administrative matters in which it is a party and can generate damages, in the Colombian context , for which a documentary research was used, and content analysis as a strategy, generating as the main finding the need to generate a regulatory framework around the responsibility of the acts or omissions of AI products, the legal status and the control of them, based on bioethical principles
