Analítica

A hundred Spanish words are classified according to the number of meanings given by a hundred of participants in a normative study. The subjective index of polysemy index is a more effective variable than the number of meaning staken from the dictionary. The aim of this study is to provide researchers with materials for working on this semantic variable that has been scarcely explored to date. Every meaning for each word is specified to simplify the production of semantic priming experiments or contextual presentation of the word
