

# Adaptación de lentes de contacto de apoyo escleral en paciente con glaucoma esteroideo tratado con válvula de Ahmed: reporte de caso [

2018

text (article)

Analítica

Patients with advanced keratoconus are frequently managed with surgical procedures such as penetrating keratoplasty. This, in turn, requires postoperative pharmacological management that includes steroids and immunomodulators that must be controlled continuously to avoid secondary complications such as steroid-induced glaucoma. In the present case, an adaptation of scleral contact lenses is described in a patient with steroid-induced glaucoma treated with Ahmed valve, to report management and the most relevant clinical considerations
