

Adopción y procreación humana asistida homoparental en Colombia: problemas a la bioética y reflexiones del bioderecho [

2014

text (article)

Analítica

A collateral finding from the research work "Analysis of homosexual matrimony from biolaw, bioethics and public biopolicies in Colombia: legislation compared to those from Holland and Spain" is introduced, aiming to establish the implications the egalitarian homosexual matrimony would have. The idea is to show the challenges for the nuclear family's structure, comprised by a father and a mother, when a homoparental family structure appears as a result of the different modalities of polyamorous relationships, supported by the technological progress that allows the selection of human embryos for assisted human procreation with the in-vitro techniques. The article also approaches the adoption of children, a subject that brings bioethical dilemmas and reflections from biolaw about the transformation of the juridical order of nuclear families
