

## Análisis de la estructura factorial de la batería luria-DNA en estudiantes universitarios [

Universidad Camilo José Cela: Departamento de Psicología y Educación,  
2007

text (article)

Analítica

The Luria-DNA battery of tests is a neuropsychological group of tests designed by doctors manga and ramos (1999) based on the material of christensen (a disciple of luria). This battery of tests provides a comprehensive neuropsychological profile of any given subject in five domains (visual-spatial, oral language, memory, intellect and attention control). Using this battery of tests, we have analyzed the factorial structure when applied to a group of 115 university students. The results obtained confirm the structure obtained by doctors Manga and Ramos in the process of standardization
