

Análisis de la concentración de ácido acético de seis marcas de vinagre de manzana [

2020

text (article)

Analítica

The objective of the study is to analyze the concentration of acetic acid of six brands of apple cider vinegar commercialized in the city of Chiclayo, Lambayeque - Peru, 2019. The approach is quantitative, experimental. Acid-base titrations were performed to determine acetic acid concentrations in six brands of apple cider vinegar, considering five repetitions to minimize measurement error. The results show that only brands 1 and 5 are within the minimum established limit of acetic acid concentration (greater than 5%). On the other hand, brands 2, 3, 4 and 6 are well below said minimum limit established to be considered as vinegars
