Analítica

In this study, I analyze digital technologies that could benefit the professional practice of family mediators in Chile. I supported the hypothesis that there are digital technologies that could contribute to safeguarding principles of mediation, favoring communication, managing emotions, and seeking agreements, in harmony with Chilean laws 19.968 and 19.628. The results show twelve digital technologies compatible with my hypothesis. I conclude that these technologies contribute to the professional practice of mediators but must not affect their overall performance and do not violate fundamental rights or the theory of mediation
