

## Análisis del proceso de aplicación de un programa de competencia familiar en el ámbito de protección de menores [

2010

text (article)

Analítica

The Socio-Educational Training and Research Group (GIFE S) at the UIB has adapted the Strengthening Families Program developed by Dr. K. Kumpfer of the University of Utah in order to apply it to different collectives at risk of problems related to drug consumption and/or social difficulties. This program aims to reduce children's risk factors and reinforce protection factors, fostering normal parent-child relations. Since 2005, the GIFE S group at the UIB has been implementing different applications of the FP C in collaboration with Proyecto Hombre and social service centres in different municipalities in the Autonomous Community of the Balearic Islands. 2009 was the year in which the program was applied for the first time with families who are under the tutelage of the Balearic Government's General Directorate for Minors. This paper analyses the process of this experimental application. The characteristics of the intervention setting reflect the participating families' needs. The types of families, their dysfunctional family situations and often negligent educational style are aspects that join situations of functional illiteracy and other unmet basic needs (pensions, salaries and/or housing). In turn, the coordination needed among the program's professionals and each family's referring technicians obliges us to study more effective coordination formulas that adapt to the organisational characteristics of the Department of Minors itself and to the program requirements to achieve the foreseen outcomes and objectives. Nevertheless, different aspects of the program and the process of its implementation that reinforced and maintained the participation of the families and functional changes that have taken place within them can be highlighted.
