

Analisi grammaticale e semantica di lessemi verbali complessi: verbi sintagmatici [

2013

text (article)

Analítica

The present paper aims at investigating and analyzing linguistically the syntax-lexicon relationship of Italian verb-particle constructions, i.e. headverbs with a modifying particle. It will provide a synchronic exploration of their double status as phrasal structures and lexical items of these complex predicates. In particular, this paper briefly focuses on the semantic and syntactic properties of verb-particle constructions (VPC) in every-day language use. This research proceeds also in studying verb-particle constructions in Italian language as a linguistic phenomenon, in order to individualize and characterize them as structurally cohesive words. The result of the research underlines their peculiar structural and semantic behavior, i.e. homogeneous and autonomous status. Moreover, in every-day spoken language, complex predicates are frequent and widespread categories and are important at the level of production and formation of new lexical units
