

Ansiedad ante la muerte y factores de vulnerabilidad asociados en ofensores sexuales reclusos en el Centro de Atención Institucional Adulto Mayor [

2015

text (article)

Analítica

Objective: To establish the relationship between vulnerability factors and death anxiety in sex offenders imprisoned in an Elderly Prison. **Methodology:** Study of mixed type, with a correlational and cross-range. **Instruments:** Death Anxiety Scale by Templer (DAS -1), State- Trait Anxiety Inventory (STAI), Geriatric Anxiety Scale (GAS), The Personal Vulnerability Factors Questionnaire and The Institutional Vulnerability Factors Questionnaire created for the purposes of this research. **Sample:** 103 elderlies from general population and 80 prisoners. **Conclusions:** In the study sample, the death anxiety is associated with failure to receive adequate medical care, a situation that makes them more vulnerable to die in prison; in addition, its status as older adults have a higher physical deterioration, which increases in an environment like prison, because of the conditions to which they are exposed
