

Aplicación de los principios éticos a la metodología de la investigación [

2013

text (article)

Analítica

2022; Bioethical principles governing the research should also be applied to the development of the research question, so that it complies with the premises of respect for said principles of beneficence, non-maleficence, autonomy and justice, as well as with the technical conditions. It would not be justifiable to set out a work that would not provide either a benefit to people or a relevant advance in knowledge. 2022; Different interests may be in the origin of ethical conflicts in research, whether by the researcher himself or by the institutions and funding entities, as well as problems relating to falsification, plagiarism and other issues concerning the publications of the obtained results and the authorship thereof. 2022; Science and research are subject to bioethical principles that grant them the status of specifically human acts. Bioethics, as a sub-discipline of ethics that studies the moral aspect of life and healthcare sciences, has been developing from the mid-20th century to nowadays, and its application in research is guaranteed by the Research Ethics Committees. However, no committee substitutes for the moral quality of the researcher, who is the true guarantor of the ethical excellence of a research work
