

Aproximación a la agricultura familiar en el Chaco: la visibilización estadística de los productores en los registros nacionales [

2020

text (article)

Analítica

Family farming as a social and economic practice is so old that it can be associated with the origin of sedentary lifestyle and the evolution of the first human groups. As an analytical category, its conceptualization is so new that it recently emerged in the first decade of this new century. If we consider as a particular lifestyle inherent to the agricultural producers of small productive units, it had a long process of formation in the world and in Latin America, the result of struggles and resistance that depend on economic policies and models according to government policies. Around 2003, in Latin America and Argentina, these social actors became agriculture family not to inform about a new economic practice but as an discursive instrument with public policies purposes. In this work we propose to synthetically recover this worlds process from a production model that was adopted in our country as a context of the situation of agriculture family. Next, we will describe and explore the situation in the Chaco province and we will show how the statistics of organizations and entities involved (non) make these social actors visible
