

Aproximación jurídica a los instrumentos económicos de mercado en el sector forestal [

2018

text (article)

Analítica

Within the group of market instruments for the protection of the environment, the forestry sector has its own and specific, although as a specification of other more general. This is the case of forest certification and its brand, as correlated to the general environmental audits and eco-labels. They evaluate especially the sustainable forest management and try to be an incentive for it, at the same time they inform the consumer of the origin and environmental adaptation of the products with the brand. On the other hand, points are made to the already proposed creation of a market whose object would be the capture and storage of atmospheric carbon by the Spanish mountains, especially in light of the latest European regulations
