

Bioética y VIH-SIDA: Una sinergia necesaria en la formación del estomatólogo general [

Universidad Católica de Valencia "San Vicente Mártir", 2011

text (article)

Analítica

Bioethics is considered the science that studies the moral values and principles of human behavior in the area of biologic and health-care sciences. From this point of view, the educational training of a stomatologist should integrate the values, moral and ethics characteristics of the profession together with the technical aspects, what will allow the complete preparation of the future graduate. Taking this into account, we performed a descriptive cross-sectional study to determine the level of knowledge of stomatology students, regarding Bioethics and HIV-AIDS, in order to design educative programs for outpatient's care. We studied 203 students from the 3rd, 4th and 5th year of the Stomatology Faculty during the academic course 2009-2010. The study sample randomly stratified was 103 students. The level of knowledge about Bioethics was low (77.67%), being the 3rd year students the lowest (94.29%) and males the highest (83.33%). Regarding HIV-AIDS, the level of knowledge was intermediate (46.60%), being females the highest (49.37%)
