

Características y manejo del lecho de las heridas crónicas [

2018

text (article)

Analítica

The preparation of the wound bed should not be seen as separate from the overall evaluation of the wound. In our usual practice, as a response to the healing of chronic wounds, we can find different types of bed such as granulation, naturalized fibrin biofilm, bacterial biofilm, denatured fibrin film and necrosis. In this article, we describe the characteristics of 6 - types of wound beds that can occur in a chronic injury, and that is important to know for a proper approach
