

"Civilización tecnológica" versus responsabilidad por la vida: una mirada ética [

2012

text (article)

Analítica

This reflection arises from the recognition of baneful examples that have categorically spoilt the conditions of worthy life on Earth, due to the obsessive control of human beings towards nature from the hegemonic groups. The aim of this article is to reveal some practices of the "Technological civilization" through the inductive method; in a process of analysis and reflection of the implications of this one, versus the responsibility for life on the planet. The results mark an eagerness of domain and control towards: nature, capacity of reflection, the use of unsustainable technologies and orientations of consumption, which transform human and nature's essence, therefore it is essential to have an ethic of responsibility for nature
