

"Cuida tu casa"

Instituto de Biomecánica de Valencia, 2011

text (article)

Analítica

Existing environments must be able to satisfy the needs of the people despite the changes they may suffer. In the case of homes, to fulfil criteria for safety, accessibility, safety, functionality and sustainability among others, will be crucial to achieve an appropriate level of quality of life in homes. Today there are more than 25 million homes in Spain, many with more than 30 years old. In this sense, the reforms are one of the mechanisms for changing environments and adapt to the needs (new or not) and thus increase the quality of life of people who live there. For this reason, ANDIMAC, Distributors National Association of Ceramics and Building Materials requested support to IBV in order to develop a new distribution model directed to the needs of people
