

ServiceNow for Architects and Project Leaders : A Complete Guide to Driving Innovation, Creating Value, and Making an Impact with ServiceNow

Justus, Roy

Monografía

ServiceNow is a cloud-based SaaS platform that automates enterprise processes and delivers a consistent, consumer-like experience. With prescriptive guidance for the design and adoption of ServiceNow, this book delivers insights and strategic advice that comes with a decade of experience leading complicated projects in the ecosystem

Título: ServiceNow for Architects and Project Leaders A Complete Guide to Driving Innovation, Creating Value, and Making an Impact with ServiceNow

Edición: 1st ed

Editorial: Birmingham Packt Publishing, Limited 2022 2022

Descripción física: 1 online resource (253 pages)

Contenido: Cover -- Title Page -- Copyright and Credits -- Contributors -- Table of Contents -- Preface -- Part 1 - Pursuit of Value -- Chapter 1: Understanding the Value of ServiceNow -- Managing for value -- What is value? -- Why is managing ServiceNow's value important? -- Who is responsible for value? -- How do we define value? -- Types of value -- Service quality -- Defining a service scope -- Service quality metrics -- Planning for service quality -- Identifying opportunities in the current state -- Aligning the implementation scope with the opportunity -- Cost optimization -- Process efficiency -- Process efficiency metrics -- Asset optimization -- Customer experience -- Tools for customer experience -- Scoping customer experience value - portals -- Scoping customer experience value - Virtual Agent -- Measuring customer experience -- Innovation enablement -- Ideation -- Project management -- Summary -- Chapter 2: Recognizing and Avoiding Value Traps -- Replicating the current state -- The tool replacement approach -- Arguments in favor of replicating the current state -- Issues with replicating the current state -- Strategy 1 - Adopting the out-of-the-box process -- Strategy 2 - Developing an MVP process -- Ignoring the current state -- Focusing on the future -- Failing to learn from the past -- Strategy 1 - Process shadowing -- Tips for conducting process shadowing -- The time investment of process shadowing -- The expected benefits of process shadowing -- Strategy 2 - Data analysis -- Targeting data analysis -- Conducting exploratory

analysis -- Integrating value and analysis -- The importance of intentional time allocation -- Chasing the long tail -- The appeal of aiming for 100% coverage -- The distribution of value -- Risks of completeness -- Strategy 1 - Top N selection -- The recommended approach for ranking Strategy 2 - Minimal implementation for long-tail items -- Not managing change -- The first cut - OCM -- Risks of reducing the OCM effort -- Optimizing value from OCM -- Responding to insufficient management of change -- Applying high-impact OCM activities -- Target state work instructions -- Transition support service -- The science experiment -- Projects extending ServiceNow -- Risks of the science experiment -- Recognizing a science experiment -- Handling a science experiment -- Summary -- Chapter 3: Capturing Value from your Implementation -- Lowering the process cycle time -- Causes of long cycle times -- Confusion in how and where to engage a process -- How to measure process cycle times and see your issues -- Delays in response to requests for service -- Inability to find the right expertise to fulfil the request -- Lost updates and poor transitions between service fulfillment parties -- How your ServiceNow transformation can reduce process cycle times -- How to prepare for an implementation with a focus on reducing the cycle time -- Optimizing asset utilization -- Causes of poor asset utilization -- How your ServiceNow transformation can improve asset utilization -- How to prepare for an implementation with a focus on optimizing asset utilization -- Automating toil -- Sources of toil -- Where ServiceNow can automate toil -- How to prepare for an implementation with a focus on automating toil -- Improving customer experience -- Where customer experience can improve -- Where ServiceNow can help improve customer experience -- How to prepare for an implementation to improve customer experience -- Summary -- Chapter 4: Planning an Implementation Program for Success -- Defining the scope of the project -- Important components of the project scope -- Adding details to the scope -- Planning the release and release activities Releasing often (minimizing impacts) -- Considering external dependencies -- Planning for data migration and validation -- Considering testing and training -- Structuring the implementation team -- Examining major project functions -- Examining team leads and their skill sets -- Can't I just hire a consultant for all this? -- Governance -- Accelerating decision-making with a good governance model -- Reducing the overhead of governance -- Value management -- Summary -- Part 2 - The Checklist -- Chapter 5: Securing Your ServiceNow Instances -- The case for investment in security -- What is at risk? -- Securing leadership support for security -- Planning for instance hardening -- Implementation security measures -- Planning for secure platform operations -- Improving instance security posture -- Instance Security Center -- Encryption -- How to approach encryption -- Encryption types -- Integration security -- Source and target system security -- Securing endpoints -- Authentication and service accounts in ServiceNow -- Role of the ServiceNow MID Server -- Summary -- Chapter 6: Managing Multiple ServiceNow Instances -- What are ServiceNow instances? -- Instance administration operations -- zBoot - a full reset of your instance -- System clone - copying the configuration and data from another instance -- Code promotion and data flow -- Designing your ServiceNow landscape -- Summary -- Chapter 7: Designing Effective Processes at Scale -- ServiceNow's process automation capabilities and archetypes -- Technical components of the platform that deal with event intake or user input -- Technical components of the platform that manage workflows -- Technical components of the platform that deal with tasking and the execution of automated actions -- Technical components of the platform that deal with shared and foundational data Designing process automation by utilizing platform building blocks and data -- Creating repeatable and reusable patterns to ease implementation complexity -- Summary -- Chapter 8: Platform Team Processes, Standards, and Techniques -- Platform management and technical standards -- Setting standards to manage platform maintenance and risk -- Standards and tips to manage platform changes -- Operational processes and techniques of technical development -- Teams should manage the accuracy of their estimations and the consistency of their throughput -- Teams should use version control whenever possible and use it as a way of managing code review and quality control processes -- Summary -- Part 3 - From Success to Innovation -- Chapter 9: Effectively Operating ServiceNow -- The differences between operations and project work -- Establishing a platform strategy -- Who will be the platform's customers? -- How will the platform fit within the broader technology landscape? -- Establishing a platform operating model -- Platform operating model roles -- Who will manage the direction of the platform and how? -- Who will manage the intake of platform demands and how? -- Who will manage how changes are implemented on the platform and how? -- Who will manage the funding of changes on the platform and how? -- Operating the platform -- Executive sponsor and operating committee -- Platform owner -- Business analyst/product owner -- Demand managers -- Platform architect -- Summary -- Chapter 10: Artificial Intelligence in ServiceNow -- Understanding AI and ML -- What is AI? -- The AI/ML capabilities of the ServiceNow platform -- Predictive intelligence -- Practical example - automating an incident routing rule -- Classification framework -- Assessing the applicability of the classification framework -- Getting started with the classification framework Regression framework -- Metrics for regression --

Input data quality -- Improving data quality -- Similarity framework -- Assessing the similarity framework's performance -- Clustering framework -- Creating a clustering solution -- Summary -- Chapter 11: Designing Exceptional Experiences -- Types of ServiceNow user interfaces -- Jelly -- Service Portal -- Next Experience -- Portals -- Types of portals -- The journey from department to enterprise portals -- Employee Center Pro -- Content taxonomy -- Custom app portals and portal customizations -- Application portals -- Workspaces -- Determining which workspaces to use -- Optimizing experiences with user-facing AI -- AI Search -- AI Search configurability -- Conversational interfaces -- Incorporating Virtual Agent into your user experience -- Advantages of Virtual Agent as a user interface -- Disadvantages of conversational interfaces -- Recommendations for Virtual Agent -- ServiceNow NLU -- Summary -- Conclusion -- Index -- Other Books You May Enjoy
