

Análisis de los impactos del Equipamiento Funerario para el desarrollo humano sustentable. [

2019

text (article)

Analítica

This article presents an analysis of the impacts of the Funeral Equipment siting on the city of Bogotá, as well as the potential of these infrastructures to contribute to environmentally sustainable human development from a socio-spatial point of view. For its elaboration, a critical analytical methodology was followed in a contrast of a conceptual framework elaborated from the Environmental Epistemology proposed by authors such as Enrique Leff and Gerardo Ardila, with the orientation of the Territorial Ordinance in Bogotá, emphasizing the Master Plan of Cemeteries and Funeral Services and its related equipment. After these stages, the public policies on the subject were followed up to establish the impact they have had on behalf of the vulnerable populations they seek to benefit, to conclude some recommendations on the potential of these facilities in the search for better quality of life for urban environments
