

Animating SwiftUI

Applications : Create Visually Stunning and Engaging Animations for IOS with SwiftUI

DeStefano, Stephen

Monografía

In Animating SwiftUI Applications, you'll reap the power of SwiftUI and its declarative programming language to create stunning animations with minimal code. You'll start by uncovering the fundamentals of SwiftUI and animation, before diving into a number of projects designed for you to advance your understanding and practice these skills

Contenido: Cover -- Copyright -- Foreword -- Contributors -- Table of Contents -- Preface -- Chapter 1: Exploring the Fundamentals of SwiftUI -- Technical requirements -- Understanding imperative and declarative programming -- Exploring the Xcode interface -- Understanding the state -- Understanding SwiftUI structures -- Computed properties -- Stacks -- Spacer views -- Divider views -- The padding modifier -- Closures -- GeometryReader -- Summary -- Chapter 2: Understanding Animation with SwiftUI -- Technical requirements -- What is animation? -- Understanding timing curves -- Understanding animation types -- Triggering animations -- Exploring animatable properties -- The offset property -- Hue rotation -- Opacity -- Scale -- Stroke, trim, and corner radius -- Summary -- Chapter 3: Creating a Breathing App -- Technical requirements -- Setting up the project with Xcode -- Adding the variables -- Implementing a background color -- Adding the circles -- Adding the first pair of circles -- Adding the second pair of circles -- Adding the third pair of circles -- Animating the circles -- Summary -- Chapter 4: Building a Record Player -- Technical requirements -- Adding images to the Assets catalog -- Creating the record player elements -- Creating the record player box -- Creating the spinning record -- Creating the record player arm -- Adding a custom dynamic button -- Creating a sound file to play audio -- Combining all the elements into one view -- Testing the project -- Summary -- Chapter 5: Animating Colorful Kaleidoscope Effects -- Technical requirements -- Adding the Binding variable and images -- Adding a Picker control and using a ForEach view -- Adding the

variables and background color -- Adding the Image view and using the hueRotation modifier -- Summary -- Chapter 6: Animating a Girl on a Swing -- Technical requirements Gathering and slicing images -- Adding the animating variables -- Adding the images to the scene -- Adding the background -- Adding the right leg -- Adding the girl -- Adding the left leg -- Bringing the images together -- Using the mask modifier -- Summary -- Chapter 7: Building a Series of Belts and Gears -- Technical requirements -- Animating our first circular gear -- Animating a worm gear using shadows -- Using a marching ants effect to create a gear belt -- Animating a gear shaft image -- Animating a fan image -- Bringing everything together in ContentView -- Adding the motor -- Adding the gears along the x-, y-, and z-axes -- Adding the worm gear -- Adding the belts -- Adding the gear shafts -- Adding the fan -- Adding the background -- Summary -- Chapter 8: Animating a Bouquet of Flowers -- Technical requirements -- Adding the variables and a winter background -- Animating the text labels -- Using the blur modifier to create a vapor effect -- Animating flower petals in an arc -- Adding the flower bouquet and the animated breath -- Creating falling snow in the scene -- Adding the UIViewRepresentable protocol -- Dealing with methods and errors -- Adding the CAEmitter class -- Summary -- Chapter 9: Animating Strokes around Shapes -- Technical requirements -- Converting images into Swift code -- Removing the image backgrounds -- Vectorizing the images -- Translating the SVG file into Swift code -- Animating images with the stroke modifier -- Creating a stroke animation on the "WE" image -- Creating a stroke animation on the heart image -- Creating a stroke animation on the SwiftUI logo image -- Combining the animated strokes -- Summary -- Chapter 10: Creating an Ocean Scene -- Technical requirements -- Adding the wave's offset property -- Creating a wave shape using the Shape protocol and Path function Adding the wave's animatableData property -- Setting up the ContentView for animation -- Duplicating and animating the wave shape in the ContentView -- Adding an animated floating buoy to the ocean scene -- Making the buoy light blink -- Making the buoy move -- Adding the buoy to the scene -- Adding sound effects -- Summary -- Chapter 11: Animating an Elevator -- Technical requirements -- Setting up the project and adding a Binding variable -- Assembling the elevator using images and the GeometryReader view -- Putting people inside the elevator -- Creating a data model and using the ObservableObject protocol -- Adding the data model functions -- Adding the doorOpenTimer function -- Adding the playChimeSound function -- Adding the playDoorOpenCloseSound function -- Adding the floorNumbers function -- Adding the stopTimer function -- Adding the background, a button, and animating the doors -- Adding floor indicator lights -- Summary -- Chapter 12: Creating a Word Game (Part 1) -- Technical requirements -- Setting up the project and creating a data model -- Building out the UI by adding a text field and list -- Displaying a character count next to each word in the list -- Checking the entered words for duplicates -- Adding a random word with a button press -- Checking if the user's entered word is possible -- Checking whether the user's entered word is a real word -- Creating HeaderView with an info button -- Creating pickerView -- Adding pickerView -- Styling pickerView -- Summary -- Chapter 13: Creating a Word Game (Part 2) -- Technical requirements -- Creating a settings screen -- Adding the language buttons -- Adding a checkmark -- Adding a dismiss button -- Styling the UI -- Adding the background -- Adding animations to the game word -- Implementing user feedback with alerts -- Adding a Footer View to display more information Adding haptics and button sounds -- Summary -- Chapter 14: Creating a Color Game -- Technical requirements -- Understanding colors -- Creating the Title view -- Creating the target and guess circles -- Creating the Picker view -- Creating the target and guess rectangles -- Making the color sliders -- Keeping track of the user's score with a button -- Showing the user's score in an Alert view -- Resetting the game -- Adding a background -- Adding confetti using Swift packages -- Summary -- Chapter 15: Integrating SpriteKit into Your SwiftUI Projects -- Technical requirements -- Animating pipe smoke -- Creating a SpriteKit particle file -- Integrating the Smoke file into a SwiftUI View -- Animating coffee steam -- Creating the Smoke SpriteKit particle file -- Creating the Coffee Steam struct -- Filling out ContentView -- Animating rocket fire -- Adding FireView -- Adding RocketView -- Putting things together inside ContentView -- Animating a blizzard -- Creating two Snow SpriteKit particle files -- Creating a view that combines the two SKS files -- Animating the tree branches -- Animating rain -- Creating the Rain SpriteKit particle file -- Creating the raindrops -- Creating the puddle -- Putting it all together -- Animating a magic wand -- Creating the magic SpriteKit particle file -- Summary -- Index -- Other Books You May Enjoy
