

Uso de Álcool, Drogas, Níveis de Impulsividade e Agressividade em Adolescentes do Rio Grande do Sul [

2014

text (article)

Analítica

Drug use in adolescence can cause damage to development, and may extend throughout life. Impulsivity is a risk factor for alcohol and other drugs, and may thus be responsible for both the beginning and the rise of drug addiction. The aim of this study was to determine how and when the onset of substance use among adolescents in Rio Grande do Sul, investigating also the levels of impulsivity and aggression among these young people, and whether there are differences between the sexes, Three instruments were used: (1) questionnaire on socio-demographic and drug use;(2) the Barratt Impulsiveness Scale, and (3) Anger Expression Inventory and State-Trait as STAXI. We conclude that the onset of substance use has occurred earlier in Rio Grande do Sul than in other states, and that the means of impulsivity and aggressiveness of these adolescents were considered elevated
